WORKSOFT®
TEST SMARTER, DELIVER FASTER.

Worksoft Certify Live Learn™

Worksoft Certify is the next generation in automated SAP testing. Rather than relying on recorded scripts that are hard to read, difficult to use and almost impossible to maintain, Worksoft Certify captures test assets in a standard format and stores the information in a central, shared repository. By storing test assets as data instead of code, Worksoft Certify transforms these assets into a reusable palette from which SAP functional users define tests of your critical business process procedures (BPPs), converting the knowledge and expertise of real business users into an enterprise asset that can be automatically executed whenever needed.

The first step in building your customized repository of test assets is to gather information pertaining to all of the screens and fields used within your SAP installation. Certify Live Learn automates this process by extracting all of the thousands of interface objects defined throughout your current SAP system configuration and custom code. These objects are then imported directly into Certify to create a complete set of maps describing every transaction, data field, and action that can be performed against the field. These application maps provide an inventory of the objects involved in SAP business processes and serve as the vocabulary for describing how tests will interact with your SAP applications.

Worksoft Certify Live Learn guarantees a complete repository of your SAP and custom objects. This provides a common, scalable application knowledge base that promotes use and reuse of components. As a result, testers can define and execute more automated tests in a shorter period of time.

Certify Live Learn is compatible with all major SAP products built on kernels 4.6c and above. Products like mySAP ERP 2005, HCM, BW, and SCM are supported on all hardware and RDBMS platforms. Maps created by Certify Live Learn can be supplemented to support BPPs that span other applications or platforms, including any custom or legacy applications, and even manual steps that you may have integrated with SAP software.

Business Analysts Go Direct

Once all of the screens, containers, objects and actions of your SAP user interface have been captured using Certify Live Learn, tests of your BPPs can be easily documented and automated using simple point and click. Simply select the field you want to test from SAP and choose the action you want to be performed. With Certify, business analysts can document and automate tests in one easy step—no programming required.

Instant Impact Analysis, Fast Response to Change

Since all Certify test assets are stored as data, changes to your environment are detected instantly. Worksoft Certify shows you every single difference—whether the change resulted from applying an upgrade or service pack, a consolidation, or perhaps the introduction of new SAP components. The impact analysis of these changes is automated and so is maintenance. Worksoft Certify enables global updates rapidly and reliably. No coding. No kidding.

Worksoft Application Lifecycle Management Solutions

Worksoft Certify

A completely new approach to automated software testing. Certify was developed to provide an analyst-friendly SAP test automation solution that requires no coding, is powerful yet easy to use, and automates the maintenance required by change in the shortest possible time frame. Worksoft's effective results cannot be accomplished by any other product or approach.

Certify Live Compare

Dramatically reduces the risk, time, cost and complexity surrounding SAP changes resulting from upgrades, merges, landscape synchronizations and audits across the SAP product portfolio including ERP, HCM, SCM, and BW. By comparing an organization's current SAP system configuration, custom code and transaction usage to the target ("to be") system, Certify Live Compare identifies the modules and custom code affected and allows organizations to better determine where testing activities should be focused.

Certify Live Model

Provides a graphical environment for designing, evaluating and optimizing SAP business processes from divisional responsibility, through processes and transactions, all the way down to the software transactions that automate the business. Using an intuitive graphical user interface, Certify Live Model provides a complete hierarchical representation of your business and incorporates the proper context of roles and responsibilities.

Certify Live Data

Allows functional specialists and end-users to extract representative subsets of production data through a point-and-click interface to address specific testing, training and development needs. Based on user defined criteria, Certify Live Data extracts discrete subsets of production data and copies it to any other system with a few simple mouse clicks.
